1	Appendix A	
	1.1	Government debt
	1.2	Leverage ratio
		Household wealth
	1.4	Marginal propensity to invest
	1.5	Removing government

1 Appendix A

1.1 Government debt

$$\mathbf{D} = \frac{1}{2}$$

$$\{ \text{u_N} \ (\sigma - \tau \ (1 + \mathcal{D}) \ (1 - \pi \ \text{s f}) \{ v \} - i \mathcal{D} * s f \tau \} \{ \text{g}^* - \text{i} \ (1 - \tau \} (\text{A2}) \}$$

1.2 Leverage ratio

$$l = \frac{\{}{(1+g)(h-\pi)}$$

$$sf-g\lambda v_h$$
 {g - i sf} (A4)

1.3 Household wealth

$$v_{\rm h} = \frac{\{}{(1-\tau)}$$

$$\left(bi+ilsf+\frac{\{u\}}{u}n\left(1+g\setminus \text{right}\right)\left(1-\alpha_1+\pi\left(\alpha_1-\text{sf}\right)\{v\}t\right)\right)\left\{\alpha_2+g\right\}\ (\text{A6})$$

1.4 Marginal propensity to invest

$$h = \frac{\{}{-}\gamma\sigma un + \gamma un\left(1+g\right)\left(1-\alpha\right)$$

$$_1 \ (1-\pi \, (1-\tau -\alpha_2 \ \gamma \ {\bf v} \ {\bf v} \ _{\bf h}) \{ \gamma \ {\bf un} \ (1+g) \} ({\bf A7})$$

1.5 Removing government

$$h = \frac{\{\alpha_2 \left(isfv\left(-\left(1+g\right)\left(h-\pi\right)\right)\right)\}}{\left(1-\alpha_1+\pi\left(\alpha_1-sf-un\right)\right)} + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\} + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\} + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\} + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\} + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right)\right) + \left(1+g\left(-1-\alpha_1\left(-1+\pi\left(2+g\right)\left(g-isf\right)\right)\right) + \left(1+g\left(-1-\alpha_1$$

•
$$g(g-isf)$$
